Quality of Life Foundation Gala Dinner: The Power of Elegance

what I have
learned: What
can I apply in
Argentina?

Quality of Life
Foundation

医科学研究者国際活動支援協議会

Clearer differences in the way of work between the Japanese and Argentine Surgeons worthy of admiration.

The approach of each patient is carried out in a multidisciplinary way, decisions are not made without a comprehensive view of each patient.

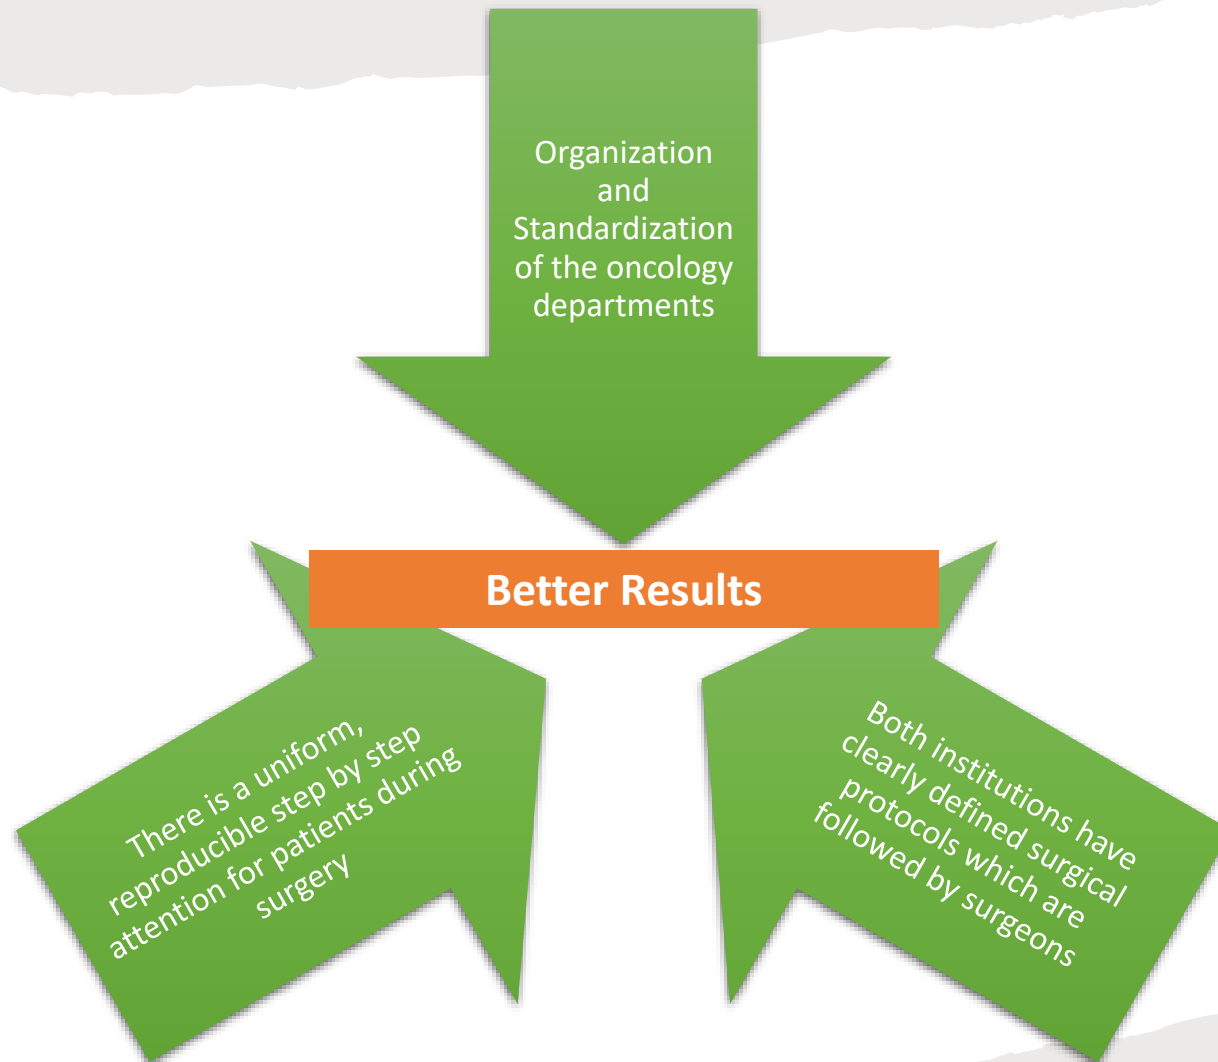

The Japanese surgeon has a deep knowledge of the surgical anatomy of each patient based on the high quality of diagnostic images before starting each operation.

All patients are discussed in a multidisciplinary institutional committee before giving a treatment. In Argentina only complex cases.

An exciting experience but not applicable in Argentina

- Thank you Quality of life foundation for an unforgettable personal experience

- Thank you Hiroko Suzuki and the Quality of Life Foundation for the opportunity to spread the excellence of Japanese medicine in countries like Argentina.
